How to easily panel mount a Keystone style connector

Keystone style refers to the snap-in mounting mechanism that many manufacturers have adopted. It is simple, requires no tools and is easily removable.

STEP 1

L-com's two piece wall plate design hides the screw holes from view to provide a sleek, clean display.

STEP 2

1 Seat fixed retainer first
2 Pivot connector upward

Depress top retainer and snap connector in place.

Seating bottom retainer and pivot connector upward while depressing upper retainer.

STEP 3

Connector fully seated

Slide the dust cover up to connect a cable assembly. The dust cover will slide closed when nothing is connected.

✓RoHS L-com Isolator Wall Plates for 10/100 and 10/100/1000 Ethernet Networks			
L-com's Ethernet Isolator wall plates are fully self-contained devices that protect valuable network equipment from damaging surges and power anomalies that commonly occur across network cabling. Operation and installation is quick and easy. Simply plug these devices in-line between the cabling behind the wall and the patch cable that normally attaches the equipment to the network. Choose from models that support 10/100 Mbps or 10/100/1000 Mbps data rates. These isolators are available in Stainless Steel or Beige High Impact ABS Plastic. Each unit is fully RoHS compliant and has been certified to meet the IEC 6060-1 Medical Device Safety Standard making them ideal for hospital and medical laboratory environments.

Tip **How isolation works**

Isolators place a physical barrier between your computer or other device and the network cables that are attached to it. Only data can travel across this barrier through the coupling of magnetic fields. Hazardous voltages and ground potential differences are blocked. Surge suppressors don't electrically separate the connected equipment - they use special components to limit the energy that can travel through a data connection. Isolators eliminate the wire connections that surge suppressors don't.
