

! TIP: *What is the purpose of an Auto Terminating Adaptor?*

In today's complex Audio, Video, Data world coaxial cables are used to interconnect various devices. Many times a coaxial cable will end up not connected to anything causing an open port. An open port allows signal to escape, possibly interfering with an adjacent device and it allows signal to enter the network as interference. Use of an auto terminating adaptor eliminates this problem by automatically terminating the open port any time a connecting device is disconnected. This eliminates the need to attach a separate terminator which is often lost or forgotten.
